Modal logic

Narrowly, traditionally: modal logic studies reasoning that involves the use of the expressions *necessarily* and *possibly*.

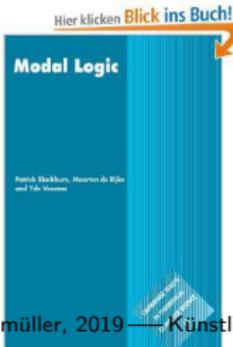

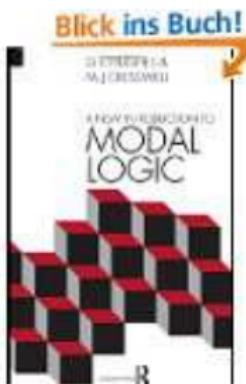

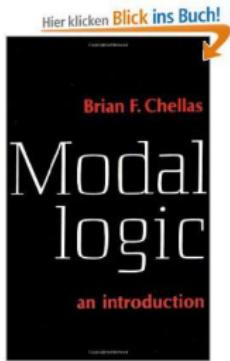

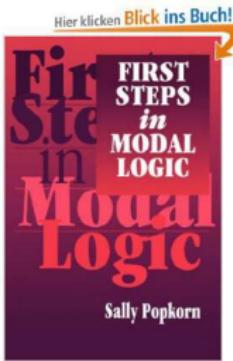

More widely: *modal logic* covers a family of logics with similar rules and a variety of different symbols.

Logic	Symbols	Expressions Symbolized
Modal Logic	\Box	It is necessary that ...
	\Diamond	It is possible that ...
Deontic Logic	O	It is obligatory that ...
	P	It is permitted that ...
Temporal Logic	F	It is forbidden that ...
	G	It will always be the case that ...
	F	It will be the case that ...
	H	It has always been the case that ...
Doxastic Logic	P	It was the case that ...
	Bx	x believes that ...

- ▶ Aristotles (356-323 BCE): developed a modal syllogistic in book I of his *Prior Analytics*, which *Theophrastus* attempted to improve
- ▶ Avicenna (980-1037): developed earliest formal system of modal logic
- ▶ William of Ockham (1287-1347) and John Duns Scotus (1266-1308): informal modal reasoning (about essence)
- ▶ C.I. Lewis (1883-1964): founded modern modal logic
- ▶ Ruth C. Barcan (1921-2012): first axiomatic systems of quantified modal logic
- ▶ Saul Kripke: Kripke semantics for modal logics; possible worlds semantics
- ▶ A.N. Prior: created modern temporal logic in 1957
- ▶ Vaughan Pratt: introduced dynamic logic in 1976.

Further Reading

Garson, James, *Modal Logic*, The Stanford Encyclopedia of Philosophy (Spring 2013 Edition), Edward N. Zalta (ed.),
<http://plato.stanford.edu/archives/spr2013/entries/logic-modal/>.

Modal logics have been used in artificial intelligence applications to model

- ▶ Knowledge (including common knowledge)
- ▶ Belief (including common knowledge)
- ▶ Actions, goals, and intentions
- ▶ Ability and Obligations
- ▶ Time
- ▶ ...

There are many further applications, also in other disciplines, including philosophy, linguistics, mathematics, computer science, ... arts, poetry

(Here are some nice slides for further reading; see also the slides of Andreas Herzig)

Material implication seems actually quite unintuitive:

$$\varphi \Rightarrow \psi \text{ iff } \neg\varphi \vee \psi$$

Problem with material implication in many applications: see e.g.
Dorothy Edgington's Proof of the Existence of God:

- ▶ If God does not exist, then it's not the case that if I pray, my prayers will be answered.

$$\neg g \Rightarrow \neg(p \Rightarrow a)$$

- ▶ I do not pray: $\neg p$
- ▶ It follows: God exists. g

- ▶ If God does not exist, then it's not the case that if I pray, my prayers will be answered.

$$\neg g \Rightarrow \neg(p \Rightarrow a)$$

- ▶ I do not pray:
- ▶ It follows: God exists.

$$\neg p$$

$$g$$

In TPTP syntax:

```
fof(ax1,axiom,((~ g) => ~ (p => a))).  
fof(ax2,axiom,(~ p)).  
fof(c,conjecture,(g)).
```

Lewis instead proposed the use of *strict implication*:

$$\varphi \Rightarrow \psi \text{ iff } \neg\Diamond(\varphi \wedge \neg\psi)$$

φ implies ψ iff it is not *possible* that φ and $\neg\psi$ are true.

Modal Logic

Modal Logic: Syntax

- ▶ any basic propositional symbol $p \in P$ is a modal logic formula
- ▶ if φ and ψ are modal logic formulas, then so are $\neg\varphi$, $\varphi \vee \psi$, $\varphi \wedge \psi$, and $\varphi \Rightarrow \psi$
- ▶ if φ is a modal logic formula, then so are $\Box\varphi$ and $\Diamond\varphi$

Prominent modal logics are constructed from a weak logic called K (after Saul Kripke).

Theorems of Basic Modal Logic K

- ▶ if φ is a theorem of propositional logic, then φ is also a theorem of K
- ▶ Necessitation Rule: If φ is a theorem of K, then so is $\Box\varphi$
- ▶ Distribution Axiom: $\Box(\varphi \Rightarrow \psi) \Rightarrow (\Box\varphi \Rightarrow \Box\psi)$

From base logic K we can derive at other modal logics by adding further axioms

Name	Axioms
K	$\Box(\varphi \Rightarrow \psi) \Rightarrow (\Box\varphi \Rightarrow \Box\psi)$
M(or T)	$\Box\varphi \Rightarrow \varphi$
D	$\Box\varphi \Rightarrow \Diamond\varphi$
B	$\varphi \Rightarrow \Box\Diamond\varphi$
4	$\Box\varphi \Rightarrow \Box\Box\varphi$
5	$\Diamond\varphi \Rightarrow \Box\Diamond\varphi$

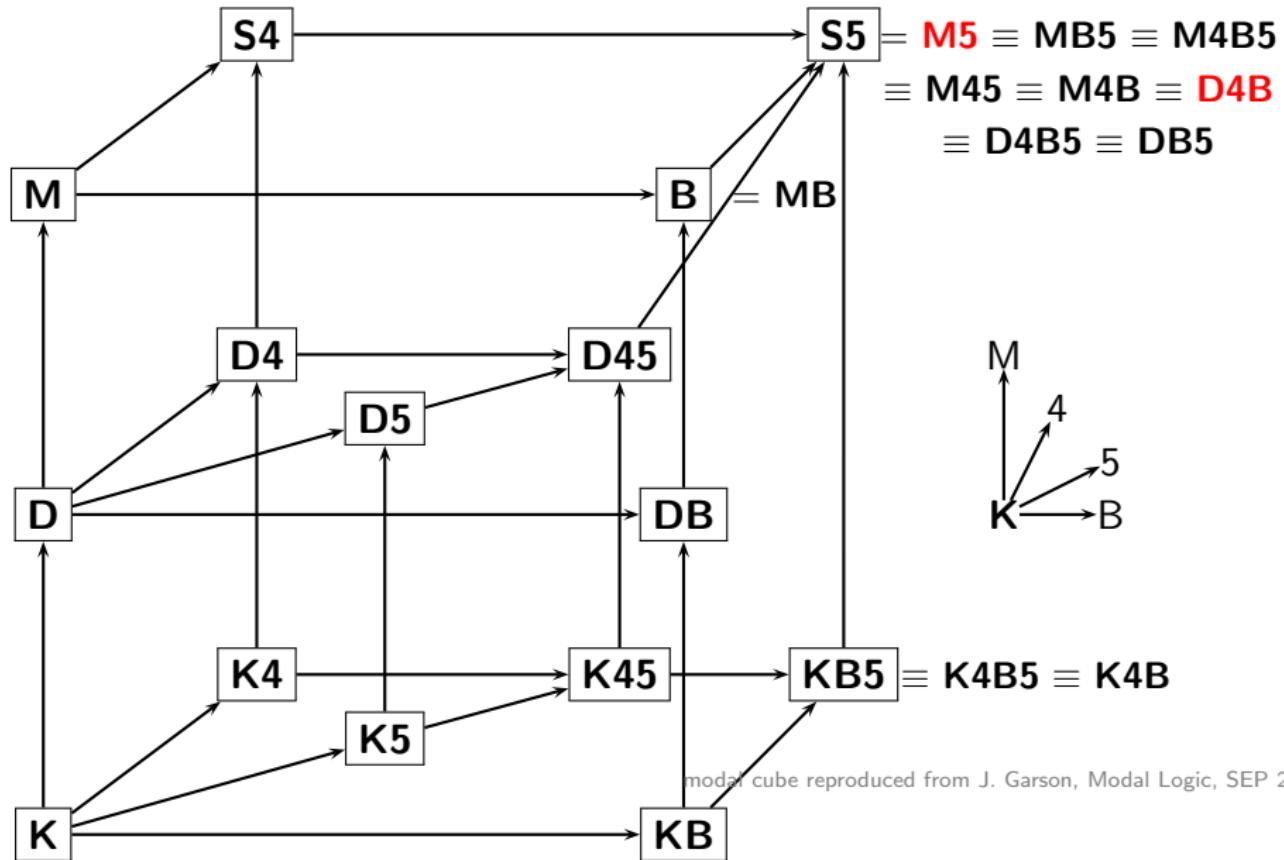

A variety of logics may be developed using K as a foundation by adding combinations of the above axioms.

Many philosophers consider logic S5 ($K+M+4+5$) an adequate choice for *necessity*.

In S5, $**\dots \Box = \Box$ and $**\dots \Diamond = \Diamond$, where each * is either \Box or \Diamond . This amounts to the idea that strings containing both boxes and diamonds are equivalent to the last operator in the sequence. Saying that it is possible that A is necessary is the same as saying that A is necessary.

Modal logic can be extended to multi-modal logic, where the \Box and \Diamond operators are annotated with the identifier of the agent who has that knowledge; see wise men puzzle above.

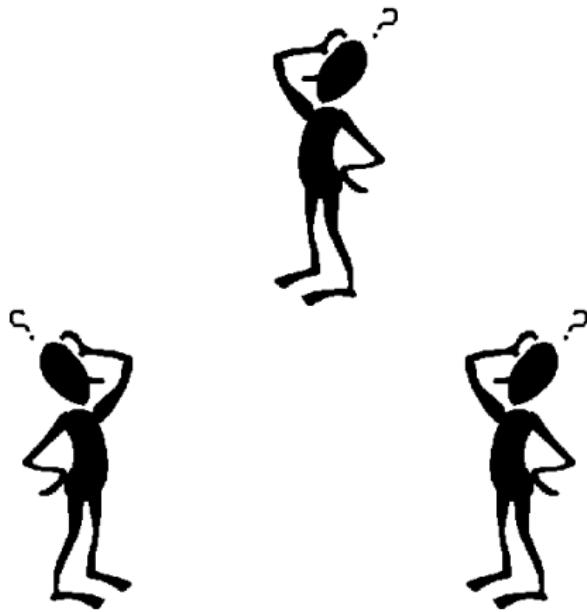

Modal Logic Cube

Can you represent and solve the following problem?

Wise Men Puzzle

Once upon a time, a king wanted to find the wisest out of his three wisest men. He arranged them in a circle and told them that he would put a white or a black spot on their foreheads and that one of the three spots would certainly be white. The three wise men could see and hear each other but, of course, they could not see their faces reflected anywhere. The king, then, asked to each of them to find out the color of his own spot. After a while, the wisest correctly answered that his spot was white.

How could he know that?

Can you represent and solve the following problem?

Wise Men Puzzle

$$\square_{\text{fool}} \varphi \Rightarrow \square_b \varphi$$

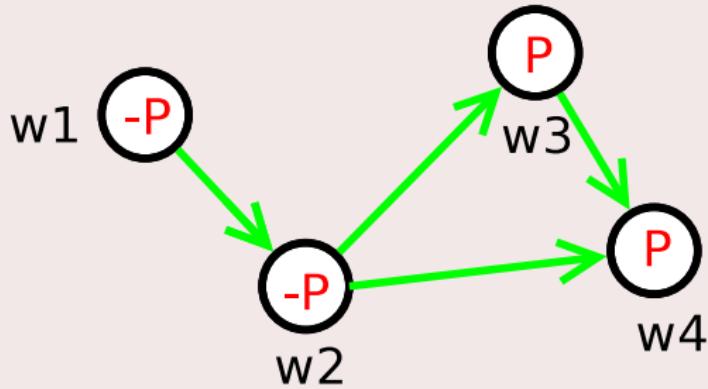

...

$$\neg \square_a ws_a$$

$$\neg \square_b ws_b$$

Query: $\square_c ws_c$

→ accessibility relation r

A Modal Frame $F = \langle W, R, v \rangle$

... consists of set of possible worlds W , a binary accessibility relation R between worlds, and an interpretation function v for assigning truth values to the basic propositional symbols $(v : PropSym \times W \longrightarrow \{T, F\})$.

Truth of a modal formula φ for a frame F and a world w

$$F, w \models p \text{ iff } v(p, w)$$

$$F, w \models \neg\varphi \text{ iff } F, w \not\models \varphi$$

$$F, w \models \varphi \vee \psi \text{ iff } F, w \models \varphi \text{ or } F, w \models \psi$$

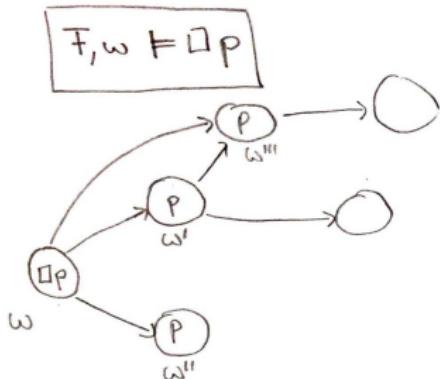

$$F, w \models \varphi \wedge \psi \text{ iff } F, w \models \varphi \text{ and } F, w \models \psi$$

$$F, w \models \varphi \Rightarrow \psi \text{ iff } F, w \not\models \varphi \text{ or } F, w \models \psi$$

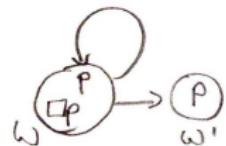

$$F, w \models \Box\varphi \text{ iff } F, w' \models \varphi \text{ for all } w' \text{ with } wRw'$$

$$F, w \models \Diamond\varphi \text{ iff } \text{there exists } w' \text{ with } wRw' \text{ s.t. } F, w' \models \varphi$$

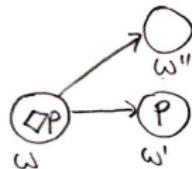

Kripke Style Semantics

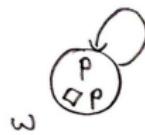

$w(\square P)$

$T, w \models \square P$

nicht möglich: $w(\square P)$

Truth of a modal formula (in base modal logic K)

A modal formula φ is true (or valid) iff it is true for all frames F and all worlds w .

Exercises:

- ▶ Show that the Distribution axiom $\square(\varphi \Rightarrow \psi) \Rightarrow (\square\varphi \Rightarrow \square\psi)$ is valid in logic K.
- ▶ Show that axiom T $\square\varphi \Rightarrow \varphi$ is valid iff the accessibility relation R is reflexive.

We have the following correspondences

Name	Axioms	Condition on R
K	$\Box(\varphi \Rightarrow \psi) \Rightarrow (\Box\varphi \Rightarrow \Box\psi)$	<i>none</i>
M (or T)	$\Box\varphi \Rightarrow \varphi$	<i>reflexive</i>
D	$\Box\varphi \Rightarrow \Diamond\varphi$	<i>serial</i>
B	$\varphi \Rightarrow \Box\Diamond\varphi$	<i>symmetric</i>
4	$\Box\varphi \Rightarrow \Box\Box\varphi$	<i>transitive</i>
5	$\Diamond\varphi \Rightarrow \Box\Diamond\varphi$	<i>euclidean</i>

Rules for Standard Connectives

$$\frac{(\sigma) \quad \neg\neg A}{(\sigma) \quad A} \neg\neg$$

$$\frac{\begin{array}{c} (\sigma) \quad A \wedge B \\ (\sigma) \quad A \\ (\sigma) \quad B \end{array}}{(\sigma)} \wedge \quad \frac{\begin{array}{c} (\sigma) \quad \neg(A \vee B) \\ (\sigma) \quad \neg A \\ (\sigma) \quad \neg B \end{array}}{(\sigma)} \neg\vee$$

$$\frac{\begin{array}{c} (\sigma) \quad \neg(A \Rightarrow B) \\ (\sigma) \quad A \\ (\sigma) \quad \neg B \end{array}}{(\sigma)} \neg\Rightarrow \quad \frac{\begin{array}{c} (\sigma) \quad A \Leftrightarrow B \\ (\sigma) \quad A \Rightarrow B \\ (\sigma) \quad B \Rightarrow A \end{array}}{(\sigma)} \Leftrightarrow$$

$$\frac{\begin{array}{c} (\sigma) \quad \neg(A \wedge B) \\ (\sigma) \quad \neg A \quad | \quad (\sigma) \quad \neg B \end{array}}{(\sigma)} \neg\wedge \quad \frac{(\sigma) \quad A \vee B}{(\sigma) \quad A \quad | \quad (\sigma) \quad B} \vee$$

$$\frac{(\sigma) \quad A \Rightarrow B}{(\sigma) \quad \neg A \quad | \quad (\sigma) \quad B} \Rightarrow \quad \frac{(\sigma) \quad \neg(A \Leftrightarrow B)}{(\sigma) \quad \neg(A \Rightarrow B) \quad | \quad (\sigma) \quad \neg(B \Rightarrow A)} \neg\Leftrightarrow$$

New Rules for Modal Operators (in Base Logic K)

$$\frac{(\sigma) \quad \diamond A}{(\sigma.n) \quad A} \diamond \quad (\text{if } (\sigma.n) \text{ is new to the branch})$$

$$\frac{(\sigma) \quad \neg \Box A}{(\sigma.n) \quad \neg A} \neg \Box \quad (\text{if } (\sigma.n) \text{ is new to the branch})$$

$$\frac{(\sigma) \quad \Box A}{(\sigma.n) \quad A} \Box \quad (\text{if } (\sigma.n) \text{ already occurs on branch})$$

$$\frac{(\sigma) \quad \neg \diamond A}{(\sigma.n) \quad \neg A} \neg \diamond \quad (\text{if } (\sigma.n) \text{ already occurs on branch})$$

New Rules for Modal Operators (beyond Base Logic K)

(In all rules: prefixes are required to already occur on the branch)

$$\frac{(\sigma) \quad \Box A}{(\sigma) \quad A} T \quad \frac{(\sigma) \quad \neg \Diamond A}{(\sigma) \quad \neg A} T$$

$$\frac{(\sigma) \quad \Box A}{(\sigma) \quad \Diamond A} D \quad \frac{(\sigma) \quad \neg \Diamond A}{(\sigma) \quad \neg \Box A} D$$

$$\frac{(\sigma.n) \quad \Box A}{(\sigma) \quad A} B \quad \frac{(\sigma.n) \quad \neg \Diamond A}{(\sigma) \quad \neg A} B$$

$$\frac{(\sigma) \quad \Box A}{(\sigma.n) \quad \Box A} 4 \quad \frac{(\sigma) \quad \neg \Diamond A}{(\sigma.n) \quad \neg \Diamond A} 4$$

$$\frac{(\sigma.n) \quad \Box A}{(\sigma) \quad \Box A} 4r \quad \frac{(\sigma.n) \quad \neg \Diamond A}{(\sigma) \quad \neg \Diamond A} 4r$$

Logic	Added Rules
D	D
T	T
K4	4
B	B, 4
S4	T, 4
S5	T, 4, 4r

Once upon a time, a king wanted to find the wisest out of his two wisest men. He told them that he would put a white or a black spot on their foreheads and that one of the two spots would certainly be white. The two wise men could see and hear each other but, of course, they could not see their faces reflected anywhere. The king, then, asked to each of them to find out the color of his own spot. After a while, the wisest correctly answered that his spot was white.

Exercise: Encode this situation in propositional modal logic.

The material in the appendix is now subsumed by the more properly presented rules above.

Theorem Proving in Propositional Logic

Resolution Method

Given: Formula F Goal: Show that F is valid.

Step 1: $\neg F$ (negate F , show contradiction)

Step 2: Apply clause normalisation rules exhaustively

$$\begin{array}{c} F[\neg A] \quad F[\neg(A \vee B)] \quad F[\neg(A \wedge B)] \quad F[A \Rightarrow B] \quad F[A \Leftrightarrow B] \\ \hline \text{FLP} \quad F[\neg A \wedge \neg B] \quad F[\neg A \vee \neg B] \quad F[\neg B \vee B] \quad F[\neg A \Rightarrow B \wedge B \Rightarrow \neg B] \end{array}$$

Step 3: Build resulting clause set

$$(L_1^1 \vee \dots \vee L_1^u) \wedge \dots \wedge (L_k^1 \vee \dots \vee L_k^m) \rightarrow \{ \underbrace{L_1^1 \vee \dots \vee L_1^u}, \dots, \underbrace{L_k^1 \vee \dots \vee L_k^m} \}$$

Literals: constant symbols or negated constant symbols

C_1 C_2
called clauses

(empty disjunction)

Step 4: apply resolution + factorization exhaustively until empty clause is found.

$$\frac{A \vee C \quad \neg A \vee D}{C \vee D} \text{ res}$$

$$\frac{A \vee A \vee C}{A \vee C} \text{ factorization}$$

(Note: We implicitly assume commutativity and associativity of ' \vee '
i.e.: $(A \vee B) \vee C \equiv A \vee B \vee C$)

If \square is found, then $\neg F$ is not satisfiable (i.e. contradiction), and hence F is valid.

If \square is not found and if no further new clauses can be derived, then $\neg F$ is satisfiable and F is not valid.

Theorem Proving in Propositional Logic

Resolution Example

$$F = ((A \Rightarrow B) \vee (A \wedge \neg(B \vee C))) \vee (A \wedge C)$$

Step 1: $\neg((A \Rightarrow B) \vee (A \wedge \neg(B \vee C))) \vee (\neg(A \wedge C))$

Step 2: $\neg((A \Rightarrow B) \vee (A \wedge \neg(B \vee C))) \wedge \neg(\neg(A \wedge C))$

$\neg(A \Rightarrow B) \wedge \neg(A \wedge \neg(B \vee C)) \wedge \neg(\neg(A \wedge C))$

$A \wedge \neg B \wedge \neg(A \wedge \neg(B \vee C)) \wedge \neg(\neg(A \wedge C))$

$A \wedge \neg B \wedge (\neg A \vee \neg(B \vee C)) \wedge \neg(\neg(A \wedge C))$

$A \wedge \neg B \wedge (\neg A \vee \neg B \vee \neg C) \wedge \neg(\neg(A \wedge C))$

$A \wedge \neg B \wedge (\neg A \vee \neg B \vee \neg C) \wedge (\neg A \vee \neg C)$

Step 3: $\{A, \neg B, \neg A \vee \neg B \vee \neg C, \neg A \vee \neg C\}$

Step 4:

A	$\neg A \vee \neg C$	$\neg C$	$C \vee \neg A \vee B$
$\neg B$	$\neg A$		

Alternative Representation

□

Resolution of $\neg F$ found. $\rightsquigarrow F$ is valid!

- | | |
|---------------------------|-------------------|
| 1: A | |
| 2: $\neg B$ | |
| 3: $\neg A \vee B \vee C$ | |
| 4: $\neg A \vee \neg C$ | $\text{res}(1+4)$ |
| 5: $\neg C$ | |

| 7: B | $\text{res}(1+6)$ |
| 8: □ | $\text{res}(2+7)$ |

Theorem Proving in Propositional Logic

Tableau Method

Given: Formula F

Goal: Show that F is valid

Step 1: $\neg F$ (negate F , show contradiction)

Step 2: Apply the following rules exhaustively until closed paths are detected, or until no new information is obtained on paths

$$\frac{\neg\neg A}{A} \neg\neg E \quad \frac{A \wedge B}{\frac{A}{B}} \wedge E \quad \frac{A \vee B}{\frac{A}{B}} \vee E \quad \frac{\neg(A \wedge B)}{\frac{\neg A \quad \neg B}{}} \neg E \quad \frac{\neg(A \vee B)}{\frac{\neg A \quad \neg B}{}} \neg E \quad \frac{A \Rightarrow B}{\frac{\neg A \quad B}{}} \Rightarrow E \quad \frac{\neg(A \Rightarrow B)}{\frac{\neg A \quad \neg B}{}} \neg E$$

$$\frac{A \Leftrightarrow B}{\frac{\begin{array}{c} A \Rightarrow B \\ B \Rightarrow A \end{array}}{\frac{\neg(A \Leftrightarrow B)}{\frac{\neg(A \Rightarrow B) \quad \neg(B \Rightarrow A)}{\neg(A \Rightarrow B) \quad \neg(B \Rightarrow A)}}}} \Leftrightarrow E$$

Step 3: Check whether Tableau is closed, that is, whether each path through the tableau contains a complementary pair of formulas P and $\neg P$.

If closed, then $\neg F$ is not satisfiable (i.e. contradictory), and hence F is valid.

If open and if no new information can be obtained on paths, then $\neg F$ is satisfiable and F is not valid (but countatisfiable).

Theorem Proving in Propositional Logic

Tabelle Example

$$F = ((A \Rightarrow B) \vee (A \wedge \neg(B \vee C))) \vee (A \wedge C)$$

Step 1: 1: $\neg((A \Rightarrow B) \vee (A \wedge \neg(B \vee C))) \vee (A \wedge C)$

2: $\neg(A \Rightarrow B) \vee (A \wedge \neg(B \vee C))$

3: $\neg(A \wedge C)$

4: $\neg(\neg A \Rightarrow B)$

5: $\neg(A \wedge \neg(B \vee C))$

6: $\neg A$

7: $\neg \neg B$

8: $\neg \neg A$

9: $\neg \neg C$

10: $\neg \neg A \wedge \neg \neg C$

11: $\neg \neg (B \vee C)$

12: $B \vee C$

13: $B \vee (B \vee C)$

14: $C \vee (B \vee C)$

15: $\neg \neg (B \vee C) \wedge (B \vee (B \vee C))$

16: $\neg \neg (B \vee C) \wedge C$

17: $\neg \neg (B \vee C) \wedge \neg \neg C$

18: $\neg \neg (B \vee C) \wedge (\neg \neg C \wedge C)$

19: $\neg \neg (B \vee C) \wedge \bot$

20: \bot

21: $\neg F$

22: $\neg \neg \neg F$

23: F

Step 3 \rightarrow Formula $\neg F$ is contradictory, hence F is valid.

Theorem Proving in Propositional Modal Logic

Tableau Method for Modal Logic K

Given: Modal logic formula \mathbb{F} . Goal: Show that \mathbb{E} is valid

Step 1: $\neg\mathbb{F}$ (conjugate \mathbb{F} , show contradiction) and start with $(1) \neg\mathbb{F}$

Step 2: Apply the following rules until closed paths are detected, or until no new information is obtained.

$$\begin{array}{c}
 \frac{(\sigma) \neg A}{(\sigma) A} \quad \frac{(\sigma) A \vee B}{(\sigma) A} \quad \frac{(\sigma) \neg(A \vee B)}{(\sigma) \neg A} \quad \frac{(\sigma) \neg(A \Rightarrow B)}{(\sigma) A \Rightarrow B} \quad \frac{(\sigma) A \Leftrightarrow B}{(\sigma) A \Rightarrow B} \\
 \frac{(\sigma) A}{(\sigma) B} \quad \frac{(\sigma) \neg A}{(\sigma) \neg B} \quad \frac{(\sigma) \neg B}{(\sigma) B} \quad \frac{(\sigma) A \Rightarrow B}{(\sigma) B \Rightarrow A} \\
 \\
 \frac{(\sigma) \neg(A \wedge B)}{(\sigma) \neg A \quad (\sigma) \neg B} \quad \frac{(\sigma) A \vee B}{(\sigma) A \quad (\sigma) B} \quad \frac{(\sigma) A \Rightarrow B}{(\sigma) \neg A \Rightarrow B} \quad \frac{(\sigma) \neg(A \Leftrightarrow B)}{(\sigma) \neg(A \Rightarrow B) \quad (\sigma) \neg(B \Rightarrow A)}
 \end{array}
 \quad \left. \begin{array}{l} \text{Simple extension} \\ \text{with "world" prefix } (\sigma) \end{array} \right\}$$

New rules for modal operators

$$\frac{(\sigma) \Box A}{(\sigma, u) A} \Box \quad \text{(if } (\sigma, u) \text{ is new to the branch)} \quad \frac{(\sigma) \neg \Box A}{(\sigma, u) \neg A} \neg \Box \quad \text{(if } (\sigma, u) \text{ is new to the branch)}$$

$$\frac{(\sigma) \Box A}{(\sigma, u) A} \Box \quad \text{(if } (\sigma, u) \text{ already occurs on branch)} \quad \frac{(\sigma) \neg \Box A}{(\sigma, u) \neg A} \neg \Box \quad \text{(if } (\sigma, u) \text{ already occurs on branch)}$$

Step 3: Check whether tableau is closed ... as before ... But now complementarity of formulas also requires identical prefixes: $\sigma\mathbb{F}$ and $\sigma\neg\mathbb{F}$ are complementary.

Theorem Proving in Propositional Modal Logic

Modal Tableaux Example

$$F = \Box(A \wedge B) \Rightarrow (\Box A \wedge \Box B)$$

Step 1: 1: $\neg(\Box(A \wedge B) \Rightarrow (\Box A \wedge \Box B))$

Step 2: 2: $\neg(\Box(A \wedge B) \Rightarrow (\Box A \wedge \Box B))$

3: $\neg(\Box A \wedge \Box B) \Rightarrow \neg(\Box A \wedge \Box B)$

4: $(\neg(\Box A \wedge \Box B)) \vee (\neg(\Box A \wedge \Box B))$

6: $(\neg(\Box A \wedge \Box B)) \vee (\neg(\Box A \wedge \Box B))$

7: $(\neg(\Box A \wedge \Box B)) \vee (\neg(\Box A \wedge \Box B))$

8: $(\neg(\Box A \wedge \Box B)) \vee (\neg(\Box A \wedge \Box B))$

9: $(\neg(\Box A \wedge \Box B)) \vee (\neg(\Box A \wedge \Box B))$

5: $\neg(\Box A \wedge \Box B) \vee (\neg(\Box A \wedge \Box B))$

10: $(\neg(\Box A \wedge \Box B)) \vee (\neg(\Box A \wedge \Box B))$

11: $(\neg(\Box A \wedge \Box B)) \vee (\neg(\Box A \wedge \Box B))$

12: $(\neg(\Box A \wedge \Box B)) \vee (\neg(\Box A \wedge \Box B))$

13: $(\neg(\Box A \wedge \Box B)) \vee (\neg(\Box A \wedge \Box B))$

$\downarrow(6+8)$

$\downarrow(10+13)$

Step 3: all paths are closed

in Logic K

Theorem Proving in Propositional Modal Logic

For Modal Logics $M, D, 4, 5, S4, S5$ etc. add (conjunctions of) the following rules:

T	$\frac{(\sigma) \Box A}{(\sigma) A} T$	$\frac{(\sigma) \Diamond A}{(\sigma) \neg \Diamond A} \neg T$
D	$\frac{(\sigma) \Box A}{(\sigma) \Diamond A} D$	$\frac{(\sigma) \neg \Diamond A}{(\sigma) \neg \Box A} \neg D$
B	$\frac{(\sigma; u) \Box A}{(\sigma) A} B$	$\frac{(\sigma; u) \neg \Diamond A}{(\sigma) \neg A} \neg B$
4	$\frac{(\sigma) \Box A}{(\sigma; u) \Box A} 4$	$\frac{(\sigma) \neg \Diamond A}{(\sigma; u) \neg \Diamond A} \neg 4$
4r	$\frac{(\sigma; u) \Box A}{(\sigma) \Box A} 4r$	$\frac{(\sigma; u) \neg \Diamond A}{(\sigma) \neg \Diamond A} \neg 4r$

all prefixes are required
to occur already on the
branch

How to extend the rules for further Modal Logics

S5	T, 4, 4r

Example:

For theorem proving in logic S4 we thus need all rules for logic K plus the rules T and 4

Theorem Proving in Propositional Modal Logic

Modal Tableau Example in logic S4 $F = (\Box \Diamond (\Box A \Rightarrow \Box \Diamond B)) \Rightarrow (\Box A \Rightarrow \Box \Diamond B)$

Step 1: 1: (1) $\neg(\Box \Diamond (\Box A \Rightarrow \Box \Diamond B)) \Rightarrow (\Box A \Rightarrow \Box \Diamond B)$

Step 2: 2: (1) $\neg\Diamond(\Box A \Rightarrow \Box \Diamond B) \quad \neg\Rightarrow(1)$

3: (1) $\neg(\Box A \Rightarrow \Box \Diamond B) \quad \neg\Rightarrow(1)$

4: (1) $\Box A \quad \neg\Rightarrow(3)$

5: (1) $\neg\Box \Diamond B \quad \neg\Rightarrow(3)$

6: (1,1) $\neg\Diamond B \quad \neg\Box(5)$

7: (1,1) $\Box A \quad 4(4)$

8: (1,1) $\Diamond(\Box A \Rightarrow \Box \Diamond B) \quad T(2)$

9: (1,1,1) $\Box A \Rightarrow \Box \Diamond B \quad \Diamond(8)$

10: (1,1,1) $\neg\Box A \Rightarrow(3) \quad 11: (1,1,1) \quad \Box \Diamond B \Rightarrow(3)$

12: (1,1,1) $\Box A \quad 4(7) \quad 13: (1,1,1) \quad \Diamond B \quad T(11)$

$\downarrow (10+12) \quad 14: (1,1,1) \quad \neg\Diamond B \quad 4(6)$

Step 3
all closed

Exercises:

- (1) Prove $\Box(P \Rightarrow \Box P)$ in T
- (2) Prove $(\Box P \wedge \Box Q) \rightarrow \Box(\Box P \wedge \Box Q)$ in K4
- (3) Prove $\Diamond \Box P \Rightarrow \Box P$ in S5
- (4) Prove $\Box P \vee \Box \neg \Box P$ in S5

Theorem Proving in Propositional Modal Logic

(1) The king announces that at least one man has a white spot.

→ It is common knowledge that at least one man has a white spot.

$$\Box_{\text{fool}}(ws_a \vee ws_b \vee ws_c)$$

"every fool knows that..."

Example:

Wise Men Puzzle

(2) If one man has a white spot, then the other two men can see this (and hence know this).

$$\Box_{\text{fool}}(ws_a \Rightarrow \Box_b ws_a)$$

$$\Box_{\text{fool}}(ws_a \Rightarrow \Box_c ws_a)$$

$$\Box_{\text{fool}}(ws_b \Rightarrow \Box_a ws_b)$$

$$\Box_{\text{fool}}(ws_b \Rightarrow \Box_c ws_b)$$

$$\Box_{\text{fool}}(ws_c \Rightarrow \Box_a ws_c)$$

$$\Box_{\text{fool}}(ws_c \Rightarrow \Box_b ws_c)$$

(3) If one man does not have a white spot, then the other two men can see this (and hence know this).

$$\Box_{\text{fool}}(\neg ws_a \Rightarrow \Box_b \neg ws_a)$$

$$\Box_{\text{fool}}(\neg ws_a \Rightarrow \Box_c \neg ws_a)$$

$$\Box_{\text{fool}}(\neg ws_b \Rightarrow \Box_a \neg ws_b)$$

$$\Box_{\text{fool}}(\neg ws_b \Rightarrow \Box_c \neg ws_b)$$

$$\Box_{\text{fool}}(\neg ws_c \Rightarrow \Box_a \neg ws_c)$$

$$\Box_{\text{fool}}(\neg ws_c \Rightarrow \Box_b \neg ws_c)$$

(4) \Box_{fool} is a modal operator as an S4 operator:

$$(\Box_{\text{fool}} S) \Rightarrow S$$

"only things that fool can be known"

$$(\Box_{\text{fool}} S) \Rightarrow (\Box_{\text{fool}} \Box_{\text{fool}} S)$$

"if S is known, then it is known that S is known"

Axioms not needed

if we use the
S4
proof rules

(5) \Box_a, \Box_b, \Box_c are modeled simply as K operators (we actually do not need more to solve the problem; it would not be wrong to also model them as S4 operators)

)

Theorem Proving in Propositional Modal Logic

- (6) We need "Inclusion axioms" that connect common knowledge with the knowledge of the agents a, b, c .

$$(\Box_{\text{for } S} \Diamond) \Rightarrow (\Box_a S) \quad (\Box_{\text{for } S} \Diamond) \Rightarrow (\Box_b S) \quad (\Box_{\text{for } S} \Diamond) \Rightarrow (\Box_c S)$$

"if S is common knowledge then S is known by a "

- (7) Whenever a wise man does (not) know something, then the others know that he does (not) know this.

$$(\Box_a S) \Rightarrow (\Box_b \Box_a S) \quad (\Box_a S) \Rightarrow (\Box_c \Box_a S)$$

$$(\Box_b S) \Rightarrow (\Box_a \Box_b S) \quad (\Box_b S) \Rightarrow (\Box_c \Box_b S)$$

$$(\Box_c S) \Rightarrow (\Box_a \Box_c S) \quad (\Box_c S) \Rightarrow (\Box_b \Box_c S)$$

$$(\neg \Box_a S) \Rightarrow (\Box_b \neg \Box_a S) \quad (\neg \Box_a S) \Rightarrow (\Box_c \neg \Box_a S)$$

$$(\neg \Box_b S) \Rightarrow (\Box_a \neg \Box_b S) \quad (\neg \Box_b S) \Rightarrow (\Box_c \neg \Box_b S)$$

$$(\neg \Box_c S) \Rightarrow (\Box_a \neg \Box_c S) \quad (\neg \Box_c S) \Rightarrow (\Box_b \neg \Box_c S)$$

- (8) The first two wise men do not know whether they have a white spot

$$\neg \Box_a \text{ws_}a$$

$$\neg \Box_b \text{ws_}b$$

- (9) We can now prove: The third wise man does know that he has a white spot.

$$\Box_c \text{ws_}c$$

Theorem Proving in Propositional Modal Logic

Example: Friends Puzzle

- (1) Peter is a friend of John, so if Peter knows that John knows something, then John knows that Peter knows the same thing. That is we know the following persistence axiom

$$(\Box_P \Box_J S) \Rightarrow (\Box_J \Box_P S)$$

↑
knowledge of John
knowledge of Peter

- (2) \Box_P and \Box_J are S4 modal operators ($S4$ is considered as adequate for modeling knowledge)

$$(\Box_P S) \Rightarrow S$$

$$(\Box_P S) \Rightarrow (\Box_P \Box_P S)$$

$$(\Box_J S) \Rightarrow S$$

$$(\Box_J S) \Rightarrow (\Box_J \Box_J S)$$

{ Previous not needed if we use S4 proof rules }

- (3) Peter is married, so if Peter's wife knows something, then Peter knows the same thing. That is we have the following inclusion axiom:

$$(\Box_{WP} S) \Rightarrow (\Box_P S)$$

- (4) \Box_{WP} is also an S4 modality: $(\Box_{WP} S) \Rightarrow S$ $(\Box_{WP} S) \Rightarrow (\Box_{WP} \Box_{WP} S)$

Theorem Proving in Propositional Modal Logic

(5) John and Peter have an appointment. Let us consider the following situation:

\Box_p time

"Peter knows the time of their appointment"

$\Box_p \Box_J$ place

"Peter knows that John knows the time of their appointment"

$\Box_{wp} (\Box_p \text{time} \Rightarrow \Box_J \text{time})$ "Peter's wife knows that if Peter knows the time of their appointment, then John knows that too." (Since they are friends.)

$\Box_p (\Box_J (\text{place} \wedge \text{time})) \Rightarrow (\Box_J \text{appointment})$

"Peter knows that if John knows the time and place of their appointment, then John knows that they have an appointment."

(6) From these assumptions one can prove:

"Each of the friends knows that Peter and John know that they have an appointment"

$(\Box_J \Box_p \text{appointment}) \wedge (\Box_p \Box_J \text{appointment})$
